## Things to Remember

Comparative advantage: A country makes a good or a factor **relatively less** than another country

Elasticity: When price elasticity of demand coefficient is greater than 1, the demand is **elastic**

When price elasticity of demand coefficient is less than 1, the demand is **inelastic**

When price elasticity of demand coefficient is zero, the demand is **perfectly inelastic**

When the cross-price elasticity is positive, the two goods are **substitutes**

When the income elasticity is positive, the product is a **normal good**

Total revenue test: When demand is elastic, an increase in the price will **decrease** the total revenue

Double profits: When two curves shift at the same time, either price or quantity will be **intermediate**

Short outputs: To be rising, price ceilings go **below** equilibrium and price floors go **above** equilibrium

Costs: Use marginal cost to determine the **quantity to produce**. Use average total cost to calculate **profit**

Perfect competition: In the product market, marginal revenue is horizontal because firms are **price takers**

Short-run rule: Firms should shut down if the price falls below the **average variable cost**

Monopolies: Price is higher and output is lower than competitive markets causing **deadweight loss**

Factor markets: In competitive markets, marginal factor cost is horizontal because firms are **wage takers**

Government Regulation: A firm won't be able to change quantity because it only affects the **fixed cost**

Negative externalities: Too much output is made because the **MSC** is **greater** than marginal private cost

Positive externalities: Too little output is made because the **MVB** is **greater** than marginal private benefit
