Eslamian,2017-07-20 This volume includes over 30 chapters written by experts from around the world It examines the environmental aspects of drought such as groundwater and soil contamination river low flow urban water quality and desertification It also examines the effects of climate change and variability on drought and discusses the differences in groundwater rainfall and temperatures and their related effects It presents analytical modeling for better understanding drought in uncertain and changing climates **Microstructural Geochronology** Desmond E.

Moser,Fernando Corfu,James R. Darling,Steven M. Reddy,Kimberly Tait,2017-11-17 Microstructural Geochronology  
Geochronology techniques enable the study of geological evolution and environmental change over time This volume  
integrates two aspects of geochronology one based on classical methods of orientation and spatial patterns and the other on  
ratios of radioactive isotopes and their decay products The chapters illustrate how material science techniques are taking  
this field to the atomic scale enabling us to image the chemical and structural record of mineral lattice growth and  
deformation and sometimes the patterns of radioactive parent and daughter atoms themselves to generate a microstructural  
geochronology from some of the most resilient materials in the solar system First compilation of research focusing on the  
crystal structure material properties and chemical zoning of the geochronology mineral archive down to nanoscale Novel  
comparisons of mineral time archives from different rocky planets and asteroids and their shock metamorphic histories  
Fundamentals on how to reconstruct and date radiogenic isotope distributions using atom probe tomography Microstructural  
Geochronology will be a valuable resource for graduate students academics and researchers in the fields of petrology  
geochronology mineralogy geochemistry planetary geology astrobiology chemistry and material science It will also appeal to  
philosophers and historians of science from other disciplines

*Dawn-Dusk Asymmetries in Planetary Plasma Environments*  
Stein Haaland,Andrei Runov,Colin Forsyth,2017-10-04 DawnDusk Asymmetries in Planetary Plasma Environments Dawn  
dusk asymmetries are ubiquitous features of the plasma environment of many of the planets in our solar system They occur  
when a particular process or feature is more pronounced at one side of a planet than the other For example recent  
observations indicate that Earth s magnetopause is thicker at dawn than at dusk Likewise auroral breakups at Earth are  
more likely to occur in the pre midnight than post midnight sectors Increasing availability of remotely sensed and in situ  
measurements of planetary ionospheres magnetospheres and their interfaces to the solar wind have revealed significant and  
persistent dawn dusk asymmetries As yet there is no consensus regarding the source of many of these asymmetries nor the  
physical mechanisms by which they are produced and maintained Volume highlights include A comprehensive and updated  
overview of current knowledge about dawn dusk asymmetries in the plasma environments of planets in our solar system and  
the mechanisms behind them Valuable contributions from internationally recognized experts covering both observations  
simulations and theories discussing all important aspects of dawn dusk asymmetries Space weather effects are caused by  
processes in space mainly the magnetotail and can be highly localized on ground Knowing where the source i e where dawn  
dusk location is will allow for a better prediction of where the effects on ground will be most pronounced Covering both  
observational and theoretical aspects of dawn dusk asymmetries Dawn Dusk Asymmetries in Planetary Plasma Environments  
will be a valuable resource for academic researchers in space physics planetary science astrophysics physics geophysics and  
earth science
