

Five Stages of mental health recovery

Recovery Happens.

Many people live in recovery from severe mental distress, leading happy and productive lives. So can you.

Your journey is unique, but these stages are often the path.

Stage 2 is a tipping point: claim your internal strength and choose to move forward with self-determination.

Engage Integrative Practitioners who do root-cause analysis. There is a large menu of evidence-based recovery options beyond drugs. Educate yourself.

Start small. One step at a time. Stay close to those who love and support you. Mistakes will be made - that's OK.

You can do this.

psychosocial variables assessed in this study Results Low illness insight correlated with low levels of social adaptation Low social adaptation correlated inversely with the case managers assessment of more social support needs for their client The clients low subjective life satisfaction correlated with higher client rated social support needs The client and case manager rated social support needs correlated strongly Conclusions Low illness insight may be an indicator of low social adaptation that might require increased case manager engagement to meet more client social support needs For this further research is essential 1 Introduction I am not mentally ill and I don t need any help is one variation of what many mental health professionals will hear from their clients with schizophrenia Amador Johanson 2000 The professionals hearing this may often be those employed by community mental health support services to help these individuals claiming not to need any help The fact that these clients are usually residents of supervised living programs makes their claim even more perplexing When their case manager or key worker asks them why they are living here the worker usually receives an answer ranging from the delusional I ve been placed here by aliens to the more mundane where else should I live I ve no other place to go ibid
