Introduction: The concept of recovery is of great importance in mental health as it emphasizes improvements in quality of life and functioning alongside the traditional focus on symptomatic remission. Yet, investigating non-symptomatic recovery in the field of personality disorders has been particularly challenging due to complexities in capturing the occurrence of recovery. Electronic health records (EHRs) provide a robust platform from which episodes of recovery can be detected. However, much of the relevant information may be embedded in free-text clinical notes, requiring the development of appropriate tools to extract these data.

Methods: Using data from one of Europe's largest electronic health records databases (the Clinical Records Interactive Search (CRIS)), we developed and evaluated natural language processing (NLP) models for the identification of occupational and activities of daily living (ADL) recovery among individuals diagnosed with personality disorder.

Results: The models on ADL performed better (precision: 0.80; 95% CI: 0.73–0.84) than those on occupational recovery (precision: 0.62; 95% CI: 0.52–0.72). However, the models performed less acceptably in correctly identifying all those who recovered, generally missing at least 50% of the population of those who had recovered.

Conclusion: It is feasible to develop NLP models for the identification of recovery domains for individuals with a diagnosis of personality disorder. Future research needs to improve the efficiency of pre-processing strategies to handle long clinical documents.

[A Practical Guide to Recovery-Oriented Practice: Tools for Transforming Mental Health Care](#)

Larry Davidson, Michael Rowe, Janis Tondora, Maria J. O'Connell, Martha Staeheli Lawless, 2008-10-02 This book takes a lofty vision of recovery and of a life in the community for every adult with a serious mental illness promised by the U S President's 2003 New Freedom Commission on Mental Health and shows the reader what is entailed in making this vision a reality. Beginning with the historical context of the recovery movement and its recent emergence on the center stage of mental health policy around the world the authors then clarify various definitions of mental health recovery and address the most common misconceptions of recovery held by skeptical practitioners and worried families. With this framework in place the authors suggest fundamental principles for recovery oriented care a set of concrete practice guidelines developed in and for the field a recovery guide model of practice as an alternative to clinical case management and tools to self assess the recovery orientation of practices and practitioners. In doing so this volume represents the first book to go beyond the rhetoric of recovery to its implementation in everyday practice. Much of this work was developed with the State of Connecticut's Department of Mental Health and Addiction Services helping the state to win a 1 ranking in the recent NAMI report card on state mental health authorities. Since initial development of these principles guidelines and tools in Connecticut the authors have become increasingly involved in refining and tailoring this approach for other systems of care around the globe as more and more governments ministry leaders system managers practitioners and people with serious mental illnesses and their families embrace the need to transform mental health services to promote recovery and community inclusion. If you've wondered what all of the recent to do has been about with the notion of recovery in mental health this book explains it. In addition it gives you an insider's view of the challenges and strategies involved in transforming to recovery and a road map to follow on the first few steps down this exciting promising and perhaps long overdue path.

apparent efficacy of such interventions that there are many policy led initiatives to implement these at national and international scales. However, few scholars or practitioners have thought in any systematic and critical way about the importance of contextualizing these interventions i.e. considering how the impact of such interventions may be affected and mediated by specific sociocultural factors from gender to ethnicity and socio-economics. The aim of the Research Topic 'The Sociocultural Context of Psychosocial Interventions' was to address this lacuna. As such we tried to help bringing a more contextual mindset to the implementation of health and wellbeing interventions. This may help to shift the way such interventions are designed and implemented both at a granular local level i.e. influencing individual practitioners and at a large scale macro level e.g. influencing policy makers. Themes within this Research Topic have concerned both macro sociocultural as well as meso and micro layers and the peculiarities of implementing real world research based on these levels. There has been room for physical and mental health, for family relationships, for educational contexts and even for the effects of crime. Some works have included interesting methodological discussions on the integration of different ecological layers or the modal distribution of our interests. For us it has been very important to work giving a greater diffusion to these issues since considering psychosocial interventions in the context in which they occur goes beyond an epistemological or methodological discussion. Rather these considerations seriously affect the ability of practitioners to really reach the people who need their interventions, listening to their needs and respecting their preferences. For the editors of this book then the contextualization of interventions means considering the people who receive them as full citizens immersed in complex societies where factors such as social justice and health or well-being do not float apart in space but affect each other dialectically. We therefore think that the duty of both academics and practitioners is not to forget that it is as important to evaluate the direct effect of our interventions as the influence we have in the society as a whole when we carry them out. We hope you enjoy reading these works and that their dissemination stimulates new lines of research committed to both good practise and social transformation.
