7th International Conference on Tourism Research Prof Rishi Balkaran, Dr Chris Hattingh, 2024-03-18 These proceedings represent the work of contributors to the 7th International Conference on Tourism Research ICTR 2024 hosted by the Centre for Tourism Research in Africa at the Cape Town Hotel School, Cape Peninsula University of Technology, South Africa, on 18-19 March 2024. The Conference Chair is Prof Rishi Balkaran and the Programme Chair is Dr Chris Hattingh, both from Cape Peninsula University of Technology, CPUT, South Africa. ICTR is a well-established event on the academic research calendar and now in its 7th year, the key aim remains the opportunity for participants to share ideas and meet the people who hold them. The scope of papers will ensure an interesting two days. The subjects covered illustrate the wide range of topics that fall into this important and ever-growing area of research. Today more than ever there is a need for research and scientific guidance as the tourist sector struggles to cope with the consequences of the Covid-19 pandemic, inflation, socio-political turbulences, climate change and disaster risk.

Advances in GIS and Remote Sensing the Landscape Pattern of Land Cover on Urban Climate and Urban Ecology Pedzisai Kowe, Cletah Shoko, Steven Jerie, 2023-11-24 The rapid urban expansion and associated land cover conversions in the last two decades call for an urgent need for developing advanced analytical and quantitative methods to manage the adverse impacts on urban ecology and climate. The lower landscape connectivity, higher land cover fragmentation and increase in higher surface temperatures in urban areas are largely a consequence of surface energy balance alteration triggered by the replacement of natural land covers like green spaces, wetlands with built areas and impervious surfaces. These spatial-temporal variability changes have detrimental and significant impacts on the local and regional urban climate challenges that require both new Geospatial Analytic approaches and new sources of data and information. Emerging Geospatial technologies, Big Data, Cloud Computing, Google Earth Engine, Advanced Machine Learning Algorithms and Deep learning offer great opportunities to acquire ubiquitous spatial data, continuous observations and monitoring of the earth's surface, detect the spatiotemporal patterns of changes in the landscape and urban climate and make predictions and scenarios for future urban
