ABSTRACT

As the popularity of monster movies kept rising in recent decades, the significance of this specific movie genre starts to reveal. This paper addresses the distal cause that underlies the psychological appeal of movie monsters. The cultural connection and realistic reflection of monster movies were investigated through surveying 36 subjects from a film history class and interviewing 10 representative samples selected from the survey subjects. The conclusion of this study is monster movies, resembling chase play, are a form of pretended predation. Engaging in such activities gives humans the ability to explore possibility spaces, predict future threats, and prepare creatively for possible dangers they can face in reality, allowing them to passively learn strategies to deal with dangerous situations in a controlled environment, increasing the survivability of individual or group while facing threats. This study found a positive correlation between how accurately monster movies reflect the audiences' realistic concerns and the level of enjoyment reported by the audiences. As a direct representation of predation, the visual impacts of monster movies exceed other forms of pretense, evoking the audiences' emotional reactions more effectively and possessing a higher level of appeal. This study provides evidence to the theory of evolutionary pedagogy and provides insights into the essence of entertainment as an economic and cultural pillar of human civilization.

1. INTRODUCTION

From a 1931 science fiction movie "Frankenstein" earning a global box office of \$12,001,420 [1], to "Resident Evil: The Final Chapter" achieving a box office of \$314,101,190 [2], the trend of the rising popularity of monster movies starts to take over the market as the public are attaching greater interest in such a movie genre. Most audiences of monster movies, when being asked about the underlying reasons for the preference of monster movies, merely have simple answers. It is because they are interesting, thrilling, or fun to watch. Apparently, such subjective answers are far from enough to support the significance of monster movies and entertainment as a whole concept.

As a million-dollar industry, other more objective reasons must exist to explain the pivotal role monster movies play as an economic pillar and cultural icon in contemporary human civilization. Why are monster movies attractive to audiences? Does the popularity of monster movies link to the essence of entertainment? Similar to eating and sleeping, entertainment is an

instinctual need of human beings. Except for satisfying proximal causes such as eliminating the negative feeling of hunger and tiredness, food provides energy for bodies to function normally, and sleeping helps cognitive health, preventing brains from overload. Can entertainment have similar functions that benefit humans somehow?

Aiming to find the benefits of monster movies and the source of its psychological appeal, this research contributes to the field by revealing links between the psychological appeal of movie monsters and possible social concerns reflected by the content of such movies, providing evidence for the theory of entertainment's pedagogical value through passive learning.
