Investigating the Stanford Prison Experiment Thibault Le Texier,2024-08-08 In 1971 psychologist Philip Zimbardo ran the now famous Stanford prison experiment to show that prison could make normal people behave in pathological ways Based on the first thorough investigation in the archives of the experiment and on interviews with about half of its participants this book shows that the Stanford prison experiment is far from being scientific In particular the guards knew what results were expected from them they were trained and supervised by the experimenters and they were following a schedule and a set of rules written by the experimenters The experimenters deceived the guards and made them believe they were not subjects They also borrowed many elements from a previous

student experiment without disclosing this information in their reports The prisoners were not allowed to leave the experiment at will and they were conditioned by the experimenters The mock prison situation was unrealistic Most participants did not forget they were participating in an experiment and many responded to demand characteristics The data was not collected properly And the conclusions were pre written according to non academic aims This book goes beyond the experiment to provide ample background and context in order to understand how the experiment was planned financed recorded and divulged in the press and within the academic It discusses also the role played by Philip Zimbardo in the trial of one of the guards of Abu Ghraib as well as the impact of mass media on science the debates between personal psychology and social psychology and the specific nature of cold war social science

Questioning Causality Rom Harré, Fathali M. Moghaddam, 2016-01-25 Covering a topic applicable to fields ranging from education to health care to psychology this book provides a broad critical analysis of the assumptions that researchers and practitioners have about causation and explains how readers can improve their thinking about causation In virtually every laboratory research center or classroom focused on the social or physical sciences today the concept of causation is a core issue to be questioned tested and determined Even debates in unrelated areas such as biology law and philosophy often focus on causality What made that happen In this book experts from across disciplines adopt a reader friendly approach to reconsider this age old question in a modern light defining different kinds of causation and examining how causes and consequences are framed and approached in a particular field Each chapter uses applied examples to illustrate key points in an accessible manner The contributors to this work supply a coherent critical analysis of the assumptions researchers and practitioners hold about causation and explain how such thinking about causation can be improved Collectively the coverage is broad providing readers with a fuller picture of research in social contexts Beyond providing insightful description and thought provoking questioning of causation in different research areas the book applies analysis of data in order to point the way to smarter more efficient practices Consequently both practitioners and researchers will benefit from this book

Teaching Peace Denny J. Weaver, Gerald Biesecker-Mast, 2003-09-08 This book opens a new frontier in understanding nonviolence Discussions of peace and nonviolence usually focus on either moral theory or practical dimensions of applying nonviolence in conflict situations Teaching Peace carries the discussion of nonviolence beyond ethics and into the rest of the academic curriculum This book isn't just for religion or philosophy teachers it is for all educators Teaching Peace begins with a discussion rooted in Christian theology where nonviolence is so central and important But it is clear that there are other paths to nonviolence and that one certainly doesn't have to be a Christian to practice nonviolence The pieces that follow therefore show how a nonviolent perspective impacts disciplines across the curriculum from acting to biology to mathematics to psychology
